CLEFTSTONE ACCESSORIES

Hand-Crafted Natural Stone Accessories
1. Photocopy this accessory request form.

2. Provide your contact information.

Company: ____________________________  Contact: ____________________________
Tel: ____________________________  Fax: ____________________________
PO #:  ____________________________  CSW #: ____________________________

3. Provide the desired quantity of pieces and select a stone.

These items are hand-fabricated from material selected to match your field tile. Please note that these items are not machined, and will have natural variation of shape, size and finish. Minimum order is one piece. These items are custom prepared to your order, and are not returnable.

Piece(s): ____________________________  Stone: ____________________________

4. Choose either a straight-cut or tumbled finish.

We can tumble up to a 16” pieces, and can provide hand-finished and chipped edges for larger sizes.

☐ Straight Cut  ☐ Tumbled (16” and smaller)  ☐ Chipped

5. Identify the desired shape.

☐ Pie Shape  ☐ Clipped Corner  ☐ Triangle Shape
☐ Elongated Pie Shape  ☐ Elongated Clipped Corner  ☐ Other ____________________________

6. Select the desired size.

☐ 6” or 6” X 12”  ☐ 8” or 8” X 16”  ☐ 12” or 12” X 24”
☐ Custom ____________________________

7. Select the desired thickness.

☐ 3/8” to 1/2”  ☐ 1/2” to 5/8”

8. Select the desired profile.

☐ Single Pencil Edge  ☐ Single Bullnose Edge  ☐ Book Edge
☐ Single Bevel Edge  ☐ Eased Flat Edge  ☐ Other ____________________________

9. Fax this accessory request form to The CleftStone Works at 610.683.9349.

When we receive your request, CleftStone will fax a confirmation form to be carefully reviewed by the client and/or installer. Production will begin after we have received your signed confirmation.

recommended for nearly all cleft, honed, and tumbled stones in most applications. The goal is to allow the surface to build a slight patina which will keep the stone conditioned and stain resistant, with a warm color on freshly sealed surfaces as a conditioner. Nothing further is required to build a patina, it will occur naturally when soap is used for regular damp-mopping and cleaning. From time-to-time, scrub the most lightly used floors and walls. The goal is to keep the surface of the stone "like new," that is: very, very clean. This is required for highly-honed or polished surfaces (like marble) that may look smeary when maintained with a patina. Avoid damp-mopping. Instead, wash, rinse and buff using pH neutral detergent cleaner, (soaps build a patina.) Keep the floor well swept, and reapply sealers after a month or so and yearly thereafter for maximum stain resistance.

Color is a thin layer on the surface (for instance to protect the vibrant color of African Rich Autumn), in high traffic or wet areas, or where high shine is required. Otherwise, avoid topical sealers as they appear thin layers rather than a single thick layer. Use only acrylic coatings designed for stone. Please avoid our stone. We find that the nature of the color change is often undesirable, and find that color enhancers often build up on the surface, at times with permanent and unfortunate results. However, color desired, but by all means test first, as color enhancing is permanent.

Grouting Tips

Ease of maintenance. Dramatic effects may be achieved using white or colored grouts. Grouting will adhere to stone and can be difficult to remove. Generally, avoid grout removers that contain acids which may damage some types of stone—always test prior to use. A stone sealer may be applied before grouting to aid cleanup.

Penetrating Sealers

Penetrating Sealers are recommended for almost all stone surfaces and grout to help prevent staining and to reduce the normal darkening of stone surfaces over time. Use high-quality subsurface penetrating sealers formulated for stone. Modern stone sealers are helpful for repelling most water and oil stains on stone and (at least a week or two after grouting) as sealing damp or treated surfaces may extremely limit effectiveness.

Ongoing Maintenance Options

Alternate Sealing Options

1. Topical Sealers. Occasionally, acrylic surface coatings may be appropriate to protect slate where the color is a thin layer on the surface (for instance to protect the vibrant color of African Rich Autumn), in high traffic or wet areas, or where high shine is required. Otherwise, avoid topical sealers as they appear thin layers rather than a single thick layer. Use only acrylic coatings designed for stone. Please avoid our stone. We find that the nature of the color change is often undesirable, and find that color enhancers often build up on the surface, at times with permanent and unfortunate results. However, color desired, but by all means test first, as color enhancing is permanent.
